## Prove that the Legendre Polynomials $P_{0-3}$ are a basis for $\mathcal{P}_4(\mathbb{R}_3[x])$ :

To show that they are a basis, we need to show that:

- 1. They span (and as a basis are also a subset of)  $\mathcal{P}_4$
- 2. They are linearly independent

Firstly we express them in terms of the Monomes  $p_n$ :

$$\begin{split} P_0 &= 1 = p_0 \\ P_1 &= x = p_1 \\ P_2 &= \frac{1}{2}(3x^2 - 1) = \frac{3}{2}p_2 - \frac{1}{2}p_0 \\ P_3 &= \frac{1}{2}(5x^3 - 3x) = \frac{5}{2}p_3 - \frac{3}{2}p_1 \end{split}$$

They span  $\mathcal{P}_4$ :

$$\begin{split} x &\in \mathbb{R}^4 \\ \text{Let } q &= x_0 P_0 + x_1 P_1 + x_2 P_2 + x_3 P_3 \\ &= x_0 p_0 + x_1 p_1 + x_2 \left(\frac{3}{2} p_2 - \frac{1}{2} p_0\right) + x_3 \left(\frac{5}{2} p_3 - \frac{3}{2} p_1\right) \\ &= \left(x_0 - \frac{1}{2} x_2\right) p_0 + \left(x_1 - \frac{3}{2} x_3\right) p_1 + \left(\frac{3}{2} x_2\right) p_2 + \left(\frac{5}{2} x_3\right) p_3 \end{split}$$

Therefore q can be expressed as a linear combination of Monomes  $p_{0-3}$  and  $:: q \in \mathcal{P}_4$ .

 $\mathcal{P}_4$  can be shown to be a subset of  $\mathrm{Span}\{P_0,P_1,P_2,P_3\}$  in the same manner.

## They are linearly independent:

If the 0 vector is the only solution for x, they are linearly independent.

$$x \in \mathbb{R}^4$$

$$x_0 P_0 + x_1 P_1 + x_2 P_2 + x_3 P_3 = 0$$

$$\left(x_0 - \frac{1}{2}x_2\right) p_0 + \left(x_1 - \frac{3}{2}x_3\right) p_1 + \left(\frac{3}{2}x_2\right) p_2 + \left(\frac{5}{2}x_3\right) p_3 = 0$$

The Monomes have already been proven to be linearly independent in Dr Gradinaru's script, hence:

$$x_0 - \frac{1}{2}x_2 = 0$$

$$x_1 - \frac{3}{2}x_3 = 0$$

$$\frac{3}{2}x_2 = 0$$

$$\frac{5}{2}x_3 = 0$$

As a Lineare Gleichungs System:

$$\begin{pmatrix} 1 & 0 & -\frac{1}{2} & 0 \\ 0 & 1 & 0 & -\frac{3}{2} \\ 0 & 0 & \frac{3}{2} & 0 \\ 0 & 0 & 0 & \frac{5}{2} \end{pmatrix} \begin{pmatrix} x_0 \\ x_1 \\ x_2 \\ x_3 \end{pmatrix} = 0$$

This matrix has full rank and therefore only has the trivial solution (0) for  $\boldsymbol{x}$ .

Therefore these Legendre Polynomials are linearly independent and their Bild is equal to  $\mathcal{P}_4$ , meaning they are a basis for the space  $\mathbb{R}_3[x]$ .
